

ASV Mono

"From model to demonstrator"

The ASV technology is patented both for monohulls and multihulls. Most of our R&D resources has until now mainly been focused on catamaran hulls but the first monohull test model is ready for testing. The initial towing tests was done with a towing rig in seawater near our office in Sandefjord Norway.

Initial towing tests with ASV Mono

The ASV mono hull can be used on a wide range of commercial, military and paramilitary applications but will also be an excellent platform for high efficient environmentally pleasure boats.

The first full scale ASV mono adapted to Volvo Penta IPS will be launched in water for initial tests autumn 2008.
